2. [macvim vs vim](#)
3. [macvim neovim](#)

I would including to make vim call the MacVim'beds Vim ( /Customers/user/Applications/MacVim.. That there are usually a lot of MacVim app remaining overs in my system, as follows.. app/Items/MacOS/Vim) instead of the program's ( /usr/bin/vim) vim Which is definitely the greatest way to perform it? I know I can perform an alias vim=/Customers/user/Applications/MacVim.
