Download

exe appears it freezes after a bit and seems to want to start again. No error codes. I'm having the same problem. If i try to load any of the titles from the bios in the memory card it loads ok but then it crashes. I have tried switching the bios for different levels and it always crashes with the same error code: 0x24. The game seems to work but not the playable. I hope this is of some use to you. I find a hard reset or "f12" sometimes helps. If you have any questions, please post them here or reply. Thank you, Jade_DeNova You need to look at the RAM. You might find that it's faulty. You can also try messing with the TOS that causes it to freeze. 1. You may have a bad memory stick 2. You may have an old BIOS that hasn't been updated yet 3. You may have an old BIOS that doesn't have the correct chip configuration 4. You may have a bad BIOS chip. Jade_ 82157476af
